

## Cümleler - 1. Ders

The brain and spinal cord are the major components of the central nervous system (CNS). The brain is the most important organ in the human body. The spinal cord is one of the two major components of the central nervous system. The human brain is the command center for the human. The brain is the most complex organ in the human body. The human brain is unique. The adult human brain is about 2% of the total body weight. The skull is the protector of the brain. The spine (vertebra) is the protector of the spinal cord. The heart is a muscular organ. The heart is a double pump. The heart is at the centre of the circulatory system. The heart is the key organ in the circulatory system. The heart is a blood pump for the body. The heart is on the left side of the chest. In the great majority of humans and mammals, the heart is in the left side of the chest. The lungs are the primary organs of the respiratory system in humans and many other animals. The lungs are the center of the respiratory system. The lungs are in the thoracic cavity. The ribs (costae) are the protectors of the heart and lungs.
